

### Case Study

# CNC Holding Boosts Production Of Innovative Products By Implementing eLabJournal

“What we really like about eLabJournal is the ease at which you will learn to work with it.”

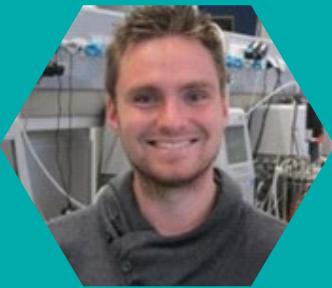

## CNC Holding

CNC Holding is an international group of companies active in the mushroom sector. The 5 companies focus on the production and the transport of substrates for growing mushrooms. CNC has six locations in the Netherlands and Poland and sells mushroom substrates in 26 countries, mainly in Europe.

### Goal

Detect and quantify DNA from micro-organisms, which can be (potential) quality parameters for the mushroom substrate production process.

MSc Researcher R&D

## Challenge

- | *Organize the increasing amount of DNA samples to isolation experiments*

I'm involved in project-management (internal/external projects), research regarding molecular sciences, enzymatic assays, solid-state fermentation, lab management and up-scaling/fine tuning phase of new products and processes. Therefore, communication with various groups is needed, and is difficult to maintain.

## Solution

- | *Samples and experiments are structured and documented in a logical manner*

What we really like about eLabJournal is the ease with which you will learn to work with it. Everything is structured and logical. We really appreciate the function in eLabJournal to link DNA samples to isolation experiments and storage information.

## Result

- | *Experiments are created and communicated easily with other team members*

Working with eLabJournal improved our internal communication and facilitated sharing the outcomes of experiments very easily and clearly. It also made it possible to monitor the work of the students and recommend timely improvements and adjustments when necessary.

## About eLabJournal

eLabJournal offers an intuitive and flexible solution to manage information in your lab. The all-in-one Electronic Lab Notebook also includes modules for sample tracking and protocol management. eLabJournal improves efficiency when documenting, organizing, searching and archiving data, samples and protocols. The software is suitable for any lab ranging from small academic laboratories and start-up companies to large academic institutes and globally operating companies.
